

Abstract

A device for collecting, drying, and transporting a urine sample, and extracting an analyte of interest from the dried sample for determining the presence or absence of the analyte or, if present, the amount or concentration thereof, is described. A preferred embodiment of the device is a sample collection strip which includes a collection pad for collecting and retaining the sample and a handle member for handling or manipulation of the device. Methods of use, and kits relating to the device are also described.
